

Scott N. Lopez – Software Engineer | Full Stack Applications and Automation

Rancho Santa Margarita, CA | (949) 279-0907 | scottlopez60@gmail.com

Portfolio: <https://scottlopez.com> | LinkedIn: <https://www.linkedin.com/in/scott-lopez-622bb832> | Website: <https://devtechlife.com>

Summary

Software engineer with experience delivering C++ and C# applications, full-stack projects using React and TypeScript, and Python-based LLM integrations. Independently translates client requirements into working systems, resolves technical blockers, and supports delivery. Brings residential real-estate transaction experience and graduated as valedictorian with a 4.0 GPA in Game Engineering.

Technical Skills

Languages: TypeScript, JavaScript, Python, C++, C#, SQL, HTML, CSS

Web and Data: React, Next.js, REST APIs, FastAPI, PostgreSQL, Prisma, Sanity, Firebase, Auth.js, OAuth

AI Applications: LLM API integration, Ollama, OpenAI-compatible APIs, Pipecat, speech recognition & synthesis, model orchestration

Engineering Tools: Git, Perforce, GitHub Actions, automated testing, Unreal Engine, Unity, Wwise

Engineering Experience

Logitech

Remote

Software Engineering Contractor

Jul 2025 – Aug 2026

- Took sole development ownership of a confidential client project, building C++ and Python software and resolving limitations across Unreal Engine and Wwise.
 - Investigated technical blockers, developed proof-of-concept solutions, and presented implementation options and progress in weekly client meetings.
 - Authored proposals, estimated hours and costs, and organized delivery phases around client fiscal quarters; revised scope as technical requirements evolved.
 - Coordinated student contributors, provided installation and workflow guidance, and organized and verified their submissions for client handoff.
 - Delivered the completed system and documentation, then provided post-handoff troubleshooting. Logitech confirmed that the system and deliverables met its requirements.
-

inciteVR

Remote

Game Engineer | Intern followed by paid contract work

Jan 2025 – Present

- Assumed sole development responsibility for a Unity medical-training application supporting VR and desktop, translating CEO and client feedback into delivered features and fixes.
 - Resolved inconsistent camera height through runtime platform detection and mode-specific offsets; delivered a fix confirmed to work in both VR and desktop.
 - Extended the scenario-event system with asynchronous sequencing so animations and scene fades could finish before progression; added visual cues during narrated teaching moments.
 - Integrated character animations with wrist inverse kinematics and custom interpolation to maintain keyboard alignment and smooth transitions between typing and other actions.
 - Delivered a working Mind Palaces study-aid prototype with a filterable 360-degree 3D icon carousel, object placement, edit and test modes, practice questions, and Firebase integration.
-

E-Line Media

Remote

Game Engineer Intern

Sep 2025 – Dec 2025

- Developed a completed gameplay feature in Unreal Engine and C++ for integration into the team's development build; collaborated with another engineer to address a related player-movement problem.
-

Glimpse Group

Remote

Game Engineer Intern

Mar 2025 – Apr 2025

- Adapted Unity VR educational scenes for desktop interaction and resolved technical and visual issues during the porting process.
-

Relevant Personal Projects

DevTechLife.com

React, TypeScript, Next.js, PostgreSQL, Prisma, Sanity, Auth.js

- Built a developer-tools and article platform with searchable, filterable listings, content detail pages, and a Sanity-backed editorial workflow.
- Implemented backend APIs and database-backed features for bookmarks, user profiles, access levels, and affiliate-click tracking, with GitHub and Google OAuth integration.
- Implemented content caching and publishing-webhook invalidation, scheduled GitHub Actions for content maintenance, and automated tests for catalog, content, and caching logic.

LeapTalkAvatar Application Integration

Python, FastAPI, HTTP APIs, Ollama, speech synthesis, avatar rendering

- Built a local application layer around existing AI models, coordinating LLM responses, speech synthesis, and avatar video generation with conversation state, error handling, and GPU resource management.
- Added application tests and end-to-end validation workflows; recorded three-turn checks verified conversation continuity and generated media, while audio-alignment checks measured no accumulated drift in the tested sample.

CatChat

Python, Pipecat, WebRTC, LLM and speech-service APIs

- Implemented a configurable voice-chat pipeline supporting local and cloud speech and LLM providers, including a custom HTTP adapter for streaming audio from local speech-generation services.

Real Estate Experience

Arbor Real Estate

Newport Beach, CA

Real Estate Agent

Mar 2018 – Present

- Guided clients through traditional residential sales, property decisions, contracts, and transaction coordination; most recent transactions closed in July 2026.

Additional Experience

Lopez McHugh LLP

Newport Beach, CA

Case Manager / IT Manager

Feb 2009 – Jan 2020

- Managed office IT infrastructure and supported litigation through data management, client coordination, and trial preparation.

Turelk, Inc.

Long Beach, CA

Project Engineer

Jun 2007 – Feb 2009

- Reviewed construction plans, assisted cost estimation, managed subcontractors, and coordinated with project teams to support on-time delivery of tenant improvement projects.

Education

University of Silicon Valley

San Jose, CA

Bachelor of Science in Game Engineering

Graduated August 2025

- Valedictorian | 4.0 GPA | With Distinction

University of Colorado

Boulder, CO

Bachelor of Art in Environmental Design

Graduated May 2006
